SNAPSHOT

5+ yrs
DevOps and platform engineering experience

Cross-sector
Aviation, travel, utilities trading, and industrial platforms

AWS + Azure
Cloud infrastructure, application hosting, and IaC

AI + Automation
Agentic workflows, CI/CD tooling, scripting, and platform integration

CORE STRENGTHS

- Automation-led platform tooling for engineering teams.
- Cloud migration, IaC, and CI/CD delivery.
- AI-assisted engineering workflows and agentic tooling.
- Governance that fits developer workflows.

PROFILE

Platform engineer for automated cloud delivery.

Senior DevOps Engineer with 5+ years' experience building platform tooling, cloud automation, and delivery workflows across aviation and travel, utilities trading, and industrial cloud environments. Progressed from Junior Engineer to Senior DevOps Engineer at NTT DATA while working across AWS, Azure, Terraform, GitHub Actions, Azure DevOps, ServiceNow automation, and identity platform configuration.

Strongest where delivery needs automation-led foundations: pipeline templates, infrastructure modules, application scaffolding, cloud migration support, environment lifecycle workflows, and developer enablement. Also designs AI-assisted engineering workflows, agentic tooling, and assistant guardrails that help teams apply project-specific practices across delivery platforms such as AWS, Jira, and Octopus Deploy.

DELIVERY APPROACH

Build delivery automation and AI-assisted engineering workflows that help teams ship cloud applications and infrastructure with less friction, stronger consistency, and clearer governance.

CI/CD automation | Agentic workflows | Cloud IaC | Developer enablement

PROFESSIONAL EXPERIENCE

NTT DATA — Senior DevOps Engineer

Cross-sector platform, DevOps, and cloud infrastructure delivery

Progressed from Junior Engineer to Senior DevOps Engineer while delivering cloud, platform, automation, and release engineering work for client delivery teams.

SECTOR DELIVERY HIGHLIGHTS

Aviation & Travel — Lead Platform Engineer

Supported aviation and travel engineering teams through on-prem to AWS migration, GitHub adoption, delivery automation, and platform enablement.

- Established central workflows and actions for Terraform, npm, .NET, SFTP, and AWS role management.
- Supported TeamCity to GitHub Actions migration, GitHub Advanced Security trials, and team onboarding.
- Helped delivery teams adopt automated release paths, reusable platform patterns, and AI-assisted engineering practices.

AWS migration | GitHub Actions | AI enablement

Utilities Trading — Platform Engineer

Built a starter platform for .NET APIs, Azure DevOps pipelines, Kubernetes manifests, and AKS deployment.

- Created object-oriented PowerShell generator for API, pipeline, and manifest scaffolding.
- Extended the template to support React or Angular frontends communicating with the API.

AKS | .NET Core | PowerShell

Industry — Platform Engineer

Led platform infrastructure for React, .NET API, and JMeter performance testing applications.

- Integrated Azure Batch, Service Bus, Event Grid, Media Services, CDN, and private networking.
- Used Terraform, YAML, PowerShell, and Docker registry workflows.

Azure | Terraform | Docker

CERTIFICATIONS

Microsoft Certified: Azure Developer Associate

AWS Certified CloudOps Engineer - Associate

GitHub Copilot

GitHub Actions

Microsoft Certified: Azure Fundamentals

EDUCATION

BSc (Hons) Computer Science, 2020

DELIVERY HIGHLIGHTS

Cloud migration, automation, platform enablement.

Cloud Migration Enablement

- Helped move core applications from on-prem hosting toward AWS environments.
- Supported GitHub adoption, delivery automation, and emerging AI-assisted engineering practices.

Aviation & Travel · AWS · GitHub

Reusable CI/CD Platform

- Built central GitHub workflows and actions for Terraform, npm, .NET, SFTP, and AWS role management.
- Reduced duplicated pipeline logic and supported TeamCity to GitHub Actions migration.

GitHub Actions · TeamCity migration · DevEx

Azure Platform Engineering

- Delivered infrastructure for React, .NET API, and JMeter performance testing apps.
- Integrated Azure Batch, Service Bus, Event Grid, CDN, Media Services, and private networking.

Azure · .NET · Terraform

Delivery Starter Kits

- Created tooling to generate .NET API, Azure DevOps pipelines, and Kubernetes manifests.
- Extended templates so React or Angular frontends could connect to APIs out-of-the-box.

AKS · PowerShell · Templates

Infrastructure as Code

- Built Terraform modules and layered infrastructure patterns across AWS and Azure.
- Improved repeatability for infrastructure changes and environment-aware delivery.

Terraform · Docker · YAML

Governed Delivery Automation

- Automated ServiceNow change creation and closure from CI/CD pipelines.
- Supported GitOps identity workflows with review, rollback, and dry-run.

ServiceNow · GitOps · Rollback

TECHNICAL TOOLKIT

Cloud	AWS · Azure · Azure Batch · Service Bus · Event Grid · Azure CDN · IAM · RDS
Hosting	AKS · Kubernetes · Docker · Lambda · Azure Functions · Azure Web Apps · IIS
IaC & delivery	Terraform · GitHub Actions · Azure DevOps · TeamCity · Octopus Deploy
Languages	PowerShell · YAML · C# · .NET · JavaScript · TypeScript · React
AI workflows	Agentic tooling · Assistant guardrails · Platform integration · Project-specific practices
Practices	Platform engineering · Delivery automation · Developer enablement · Change control
